What is Flipped Classroom

What advantages of Flipped Classroom

03 Problems and challenges

The flipped or inverted classroom is a new and popular instructional model, in which activities traditionally conducted in the classroom (e.g., content presentation) become home activities, and activities normally constituting homework become classroom activities.

Bergmann, J., & Sams, A. (2012). Flip your classroom: Reach every student in every class every day. USA: International Society for Technology in Education.

- Flipped classrooms are centered around the students – not the teacher.
- Student-centered learning embodies a set of theories that include: active learning, peer-assisted learning, and collaborative learning.

Lai, C.-L., & Hwang, G.-J. (2016). A self-regulated flipped classroom approach to improving students' learning performance in a mathematics course. Computers & Education, 100, 126–140.

Bhagat, K. K., Chang, C.-N., & Chang, C.-Y. (2016). The impact of the flipped classroom on mathematics concept learning in school. Journal of Educational Technology & Society, 19(3), 134–142.

Six inductive categories were created for the advantages :

learner outcomes

One of the most significant advantages of this model is that it helps to improve learning performance, which is one of the key elements of quality education.

Leo, J., & Puzio, K. (2016). Flipped instruction in a high school science classroom. Journal of Science Education and Technology, 25(5), 775–781.

learner outcomes

Inductive categories	Sub-categories
Learner Outcomes	Improves learning performance
	Satisfaction
	Engagement
	Motivation
	Increases knowledge
	Improves critical thinking skills
	Feeling more confident
	Promotes creativity
	Focus on Problem solving skills
	Better retention
	Improves application skills
	Improves ICT skills

 Also the flipped model also enhances student satisfaction (18%) and their level of engagement.

 Advantages such as enhancing confidence, promoting creativity, and increasing problem solving skills were reported by a few researchers.

Leo, J., & Puzio, K. (2016). Flipped instruction in a high school science classroom. Journal of Science Education and Technology, 25(5), 775–781.

pedagogical contributions

Pedagogical Contributions

Flexible learning Enables individualized learning Enhances enjoyment Better preparation before class Fosters autonomy Offers collaboration opportunities Enables more feedback Fosters higher self-efficacy Provides peer-based learning Increases study effort Supports interest in the course Improves attendance Suitable for large group teaching Decreases withdrawals The most prominent pedagogical contribution of the flipped classroom is its flexibility

Can pause, rewind, and review lectures using technology

Enabling individualized learning and enhancing student enjoyment of the lectures

He, W., Holton, A., Farkas, G., & Warschauer, M. (2016). The effects of flipped instruction on out-of-class study time, exam performance, and student perceptions.

Dispositions, interaction, time efficiency & other

Time Efficiency	More efficient class time		
	More time for practice		
Dispositions	Positive feedback from students		
	Positive perceptions (students)		
	Positive attitudes		
	Positive perceptions (teachers)		
Interaction	Interaction (Students-Instructor)		
	Interaction (General)		
	Interaction (Students-Students)		
Other	Less anxiety		
	Cost effective		
	Students adapt quickly		

Students had positive perceptions towards flipped classrooms

Increases in students-instructor interaction

Ability to use class time more efficiently

McEvoy, C. S., Cantore, K. M., Denlinger, L. N., Schleich, M. A., Stevens, N. M., Swavely, S. C., ... Novick, M. B. (2016). Use of medical students in a flipped classroom programme in nutrition education for fourth-grade school students. Health Education Journal, 75(1), 38–46.

The most commonly reported problem is students' limited preparation before class time. If a student does not take time to study at home, s/he may not perform well in the classroom activities, and this may diminish the advantages of the flipped classroom.

Lo, C. K., & Hew, K. F. (2017). A critical review of flipped classroom challenges in K-12 education: Possible solutions and recommendations for future research. Research and Practice in Technology Enhanced Learning, 12(4), 1–22.

From the students' perspective

the flipped model requires more time and work:

- This model prompts students to preview the learning materials for better in-class participation
- some of the students acquired passive learning habits from the traditional classroom, where learning requires less time and wor
- a relatively new approach, can cause problems such as anxiety, adoption problems, and resistance to change.

Hung, H.-T. (2015). Flipping the classroom for English language learners to foster active learning. Computer Assisted Language Learning, 28(1), 81–96.

From the students' perspective

the flipped model requires more time and work:

- This model prompts students to preview the learning materials for better in-class participation
- Some of the students acquired passive learning habits from the traditional classroom, where learning requires less time and work
- A relatively new approach, can cause problems such as anxiety, adoption problems, and resistance to change.

From the teachers' perspective

might require more time and workload:

- Pre-recording video lectures and preparing other flipped model materials is time consuming for teachers.
- The actual time needed to prepare flipped course materials can be nearly six times more than traditional course preparation

Hwang, G.-J., & Tsai, C.-C. (2011). Research trends in mobile and ubiquitous learning: A review of publications in selected journals from 2001 to 2010. British Journal of Educational Technology, 42(4), E65–E70.

A novel integration of online and flipped classroom instructional models in public health higher education

Lindsay P Galway^{1*}, Kitty K Corbett^{1,2}, Timothy K Takaro¹, Kate Tairyan¹ and Erica Frank³

Galway L P, Corbett K K, Takaro T K, et al. A novel integration of online and flipped classroom instructional models in public health higher education[J]. BMC medical education, 2014, 14(1): 1-9.

Table 3 Descriptive statistics of post-course survey items focusing on learning experience and perceptions

Survey item	Agree/strongly agree (%)	Disagree/strongly disagree (%)	Neutral (%)
I was comfortable with self-directed learning through NextGenU.	100	0	0
The online learning materials contributed to my learning.	100	0	0
I completed the activities and learning materials before in-class sessions.	100	0	0
The quizzes encouraged completion of the online learning materials.	82	0	18
In-class learning activities complemented online self-directed learning.	100	0	0
The reflective responses contributed to my learning.	91	0	9
Interaction with my instructor and other classmates contributed to my learning.	100	0	0
The flipped classroom model (online learning plus in-person classroom interaction and problem-solving) was a different learning experience than other MPH courses.	100	0	0
The flipped classroom model enabled more interaction with my instructor and classmates than did other MPH courses.	82	0	18
In the future, I would rather take a 'flipped' course (blended online learning plus in-persons classroom interaction and problem-solving) than a traditional (lecture-based) course.	82	9	9

NB: Students were asked to react to statements on a 5-point Likert scale where 1 = "Strongly disagree" and 5 = "Strongly agree." For reporting of these survey items, agreement (strongly agree and agree) and disagreement (strongly disagree and disagree) were combined.

Galway L P, Corbett K K, Takaro T K, et al. A novel integration of online and flipped classroom instructional models in public health higher education[J]. BMC medical education, 2014, 14(1): 1-9.

This instructional model should be considered for more widespread experimentation in the context of public health higher education and beyond.

flipping' the classroom is not simply about shifting lectures outside of the classroom. 'Flipping' the classroom involves seeing students as active learners, shifting control of both learning and the classroom from the instructor to the students; it should promote a focus on higher-order cognitive work.

more research is needed to understand the role of reflection in the flipped classroom instructional model.

Galway L P, Corbett K K, Takaro T K, et al. A novel integration of online and flipped classroom instructional models in public health higher education[J]. BMC medical education, 2014, 14(1): 1-9.
